

determining at least one transfer point in the source code of a first method where control of execution of the first method may be transferred from the SCIP to the BCIP;

inserting, during compilation of the source code, a control transfer method, wherein the transfer method is operable to execute the first method from the corresponding transfer point; and

extending the bridge class with a method calling to the control transfer method.

31. The method of claim <sup>39</sup>~~30~~ wherein the control transfer method is inserted at the corresponding transfer point.

#### REMARKS

Applicant requests consideration of the claims added above in the present application. Applicant submits herewith the fee under 37 CFR §§ 1.16(b) and 1.16(c) for the claims added by this amendment.

Respectfully Submitted,

Date: December 7, 2001
